

Project Test – Fullstack To-Do Application

Your task is to complete the frontend To-Do app by connecting it to the backend API and making it fully functional.

Technology Stack

Backend: Spring Boot 3, Spring Web, Spring Data JPA, Spring Security (JWT), Validation, Swagger

Frontend: ReactJS, Axios, React Router DOM, Bootstrap

Backend Setup

Requirements

- Java JDK 21+
- Maven
- MySQL Database
- Git
- IDE (e.g., IntelliJ IDEA)

Steps

1. Fork and clone the backend repository: [ToDo API](#)
2. Run the backend server.
3. Test all API endpoints via Swagger.
4. Verify JWT authentication is working.

User Credentials

Admin User

Username: admin
Password: password
Role: ADMIN
Email: admin@test.se

Regular User

Username: user1
Password: password
Role: USER
Email: user1@test.se

Email Service (Optional)

If you want to enable email notifications:

- Clone this repo: [notify-util-spring](#)
- Add its dependencies to your pom.xml.
- Set environment variables:
APP_USER_EMAIL=your_email@example.com
APP_USER_PASSWORD=your_password
- Enable NotifyUtilConfig in App Config.

Frontend Setup

Requirements

- Node.js 20+
- IDE (e.g., VSCode)

Steps

5. Fork and clone the frontend repository: [ToDo Front](#)
6. Run the React frontend.
7. Check existing routes, navigation, and context setup.

Tasks to Complete

Task Management

- Finish **Task.jsx** (UI + logic).
- Implement taskService.js with API calls.
- Ensure state updates correctly after API calls.

User Management (*Optional*)

- Create **User.jsx** component.
- Add API calls for managing users.
- Restrict access to Users menu for admin role only.

Dashboard (*Optional*)

- Implement APIs needed for dashboard.
- Complete dashboard UI and logic.
- Add extra features to enhance usability.
